

OptoMicroMed-Gripper

CONTACTLESS HANDLING OF INTRAOCULAR LENSES

The OptoMicroMed-Gripper supports the medical technology, especially the manufacturing of lenses. Our product is possible to grip and deposit intraocular lenses without contact.

No scratches on the lens body

The lens is made by the combination of ultrasound and negative pressure with a specially designed sonotrode tip is kept contactless.

This prevents micro-scratches and contamination.

Besides from gripping and (un)loading, the gripper can be used for sorting and singulating.

Features of the OptoMicroMed-Gripper:

- Suitable for different diopters
- Customizable according to customer specifications
- Compatible with all robot systems
- Suitable for clean rooms

Innovative Technology:

Ultrasonic Suspension

Our handling systems use the ultrasonic suspension technology to apply the handling forces to the workpiece and can be used in all atmospheric processes.

Vibration generators with separate power electronics generate a compressed air film with repulsive forces. Process combinations enable the generation of attracting forces.

The surrounding air or process gas is compressed by the ultrasound. This allows components to be lifted and guided along defined paths without contact. In combination with negative pressure, workpieces can also be gripped on the upper side - without touching them.

The ultrasonic suspension technology requires less energy than other non-contact handling technologies.

We at ZS-Handling have a mission:

to enable our customers to handle sensitive products in production and for testing purposes without contact.

We make parts float.

Since 2006, we have been developing, producing and selling components and special machines for users in Europe, North America and Asia.

Our Products

LeviWafer-Gripper
 LinearLevi-Conveyor
 LinearLevi-Inspektions-Modul
 LinearOverhead-Transport-System
 Modular Waferhandling-System
 OptoMicroMed-Gripper
 RobotOverhead-Gripper
 RollToRoll-Transport-System
 UltraLevi-Desk

Applications

- Battery and fuel cell
- Foil
- Glass
- Lenses
- Medical Technology
- Packaging
- Wafer & Chips

Processes

- Loading and unloading
- Conveying
- Gripping
- Inspection
- Sort
- Seperate
